

Main product coil line for blanking press

Main Services

Various coil lines, automated feed & transfer devices mainly press peripheral equipment

Main Clients

Manufacturers of automotive related parts, steel, coil center, building materials, home appliances and press machines

Main Products

Various coil line, press automated equipment

Company overview

Address / 4-88 Otashinmachi, Yao city, Osaka 581-0039
Tel / +81-72-943-1213 Fax / +81-72-943-1223

Initial Capital / JPY 30 million Employees / 43

Manufacturing and sale of automated equipment of devices

Contribute to automation and efficiency of press peripheral equipment at home and abroad

Business Outline

Leveler Feed, transfer and various coil lines

They have over 80 years of history as all-embracing manufacturer of feed device mainly coil line. At the time of founding, they were dealing with turning process and air tool repairing and started to develop current main products with the request of feed device of press as a starting point. They expand production of such press automated device such leveler feeder. Contribute to automation and efficiency of peripheral equipment of before and after processing, and they focus more on products for after processing such handling robots between presses recently. Shear line and slitters which cut such sheet copper for such coil center. Cut and stacking device for iron core of transformers, which they supply them to manufacturers of transformers and its suppliers, contributes to their performance in 2008 financial crisis time.

Development model announced at the exhibition

Strength

Deal with wide range of industries with custom order products

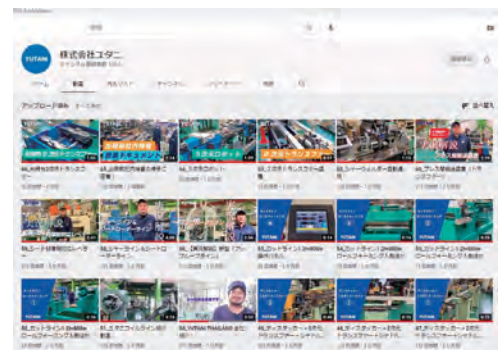

Meet demands from design, development, manufacturing and assemble consistently, and commercialize, then improving features such significant foreshortening of set-up change with their accumulated know-how since their foundation. This is highly evaluated by their clients and it's their strength that their products are used in various industries such automotive, building materials and home appliances. As capital investment, they integrated their deployed 4 factories in Osaka to headquarter factory in Osaka in 2016. Improved in-house

process ratio and production efficiency and strengthened visualization of the factory. Their subsidiary in Thailand, which was establish in 2016, produces the similar quality of products as Japanese factory and supply to Japanese companies in Thailand and Asia. By using both at home and abroad production bases, they increased 20% of foreign sales ratio and sells in over 20 countries.

Employee development

Challenge to develop with teamwork and education

Teamwork is the creed for them which does integrated manufacture from design to assemble of custom-made products. Holding "education" as their priority subject of management policies and they proactively invest on recruitment and improvement of work environment. From 2020, they started "action of check sheets" as part of personnel training. Also, they use YouTube to spread information of their products for both sales activities and employee education and join external in-house training system of such Osaka Committee of the Association of Small-and-Medium-Size Enterprises. President Tatsumi emphasizes "We'd like to keep challenging to intergrow with all employees."

Proposing manufacturing using SNS

Greeting from President

They've manufactured machines for over 7,000 properties until now. They've never given up and worked on to manufacturing production facilities with responsibility over about 30 years with their knowledge and knowhow. They keep challenging to maintain manufacturing great products and great maintenance with thier all employes together.

CEO Yoshitake Tatsumi
